OM protein - protein search, using sw model

Run on:

August 25, 2004, 16:58:21; Search time 32.5 Seconds (without alignments) 4554.937 Million cell updates/sec

Title: Perfect score: 1 Sequence:

141681 seqs, 52070155 residues Searched:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Scoring table:

141681

Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt\_42:\* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: Tumor suppressor. Promotes rapid degradation of CTNNB1
and participates in Mrt signaling. APC activity is correlated with
its phosphorylation state (By similarity)
-!- SUBUNT: Forms homooligomers. Associates with catenins. Binds
axin (By similarity).
-!- PTM: Phosphorylated by GSK3B (By similarity).
-!- PTM: Phosphorylated by GSK3B (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         OTDMTRROLEYBAROIRVAMBEQLGTCQDMEKRAQRRIARIQQIEKDILRIRQLLQSQAT

"APC gene messenger KhA: novel isoforms that lack exon 7.";

"APC gene messenger KhA: novel isoforms that lack exon 7.";

Cancer Res 53.5589-5591 (1933).

-!- FUNCTION: Tumor suppressor. Promotes rapid degradation of CTINNB1 and participates in Wnt signaling. APC activity is correlated with its phosphorylation state (By similarity).
-!- SUBUNIT: Forms homooligomers. Associates with catenins. Binds
                                                                                                                                                                                                                                                                                                                                                                                                      2756 AERTPPSSSSSKHSSPSGTVAARVTPFNYNPSPRKSSADSTSARPSQIPTPVGSSTKKR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          801
bridging between microtubules and other skeletal elements.
SUBUNIT: 3 different light chains, LC1, LC2 and LC3, can associate with MAPIA and MAPIB proteins.
TISSUE SPECIFICITY: BRAIN, HEART AND MUSCLE.
DEVELOPMENTAL STRGE: EXPRESSED LATE DURING NEURONAL DEVELOPMENT APPEARING WHEN AXONS AND DENDRITES BEGIN TO SOLIDIFY AND STABILIZE
                                                                                                                                                                  THEIR MORPHOLOGY.

-1- DOWALN: THE basic region containing the repeats may be responsible for the binding of MAPIA to microtubules.
-1- PTM: Ucz is corrected may be phosphorylated by cAMP kinase.
-1- PTM: LC2 IS CORRERESSED WITH MAPIA. IT IS A POLYBEPTIDE GENERATED FROM MAPIA BY PROTECLYTIC PROCESSING. IT IS FREE TO ASSOCIATE WITH BOTH MAPIA AND MAPIB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   90 IGADNLPGINGLLQRK-----VAELEEEQSQGSSSYSDWVKNLISPELGVVFFNVPD

Expressed prior to callularization in stage 3 embryos, and in blastoderm cells, including pole cells. Expressed throughout the rest of embryogenesis. Later, it is expressed at higher level in epidermal cells and CNS.

DEVELOPMENTAL STAGE: Isoform 3 is expressed both maternally and
                                                                                                                                                                                                                                                                                                            Development 130:3125-3135 (2003).

-!- FUNCTION: Probable corepressor protein, which regulates different key pathways such as the EGF receptor and Wg pathways. Involved in neuronal call fate, survival and axon guidance, cell cycle regulation and repression of head identity in the embryonic trunk. May act with the Hox gene Deformed and the EGF receptor signaling pathway. Positive regulator of the Wg pathway in larval tissues but not in embryonic tsues. May act as a transcriptional corepressor protein, which repress transcription via the recruitment of large complexes containing histone deacetylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ğ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                zygotically.
--- SIMILARITY: Belongs to the Spen family.
--- SIMILARITY: Contains 3 RNA recognition motif (RRM) domains.
--- SIMILARITY: Contains 1 SPOC domain.
--- CAUTION: It is uncertain whether Met-1 or Met-7 is the initiator.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the Buropean Bioinformatics institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
regulator of the Notch pathway via its interaction with RBPEUH, which prevents the association between NOTCH1 and RBPSUH, and therefore suppresses the transactivation activity of Notch signaling. Blocks the differentiation of precursor B cells into marginal zone B cells. Probably represses transcription via the recruitment of large complexes containing histone deacetylase proteins. May bind both to DNA and RNA.

-!- SUBUNIT: Interacts with NOOR2, HDAC1, HDAC2, RBBP4, MBD3 and MTALL1. Interacts with he nuclear receptors RAR and PPARD. Interacts with RAR in absence of ligand. Bind to the steroid receptor RNA coactivator SRA (By similarity). Interacts with MSX2. Interacts with RBPSUH; this interaction may prevent the interaction between RBPSUH and NOTCH1.

-!- SUBCELLULAR LOCATION: Nuclear. Associates with chromatin.

Note=No experimental confirmation available;
Iso3DE SEPECIFICITY: Highly expressed in testie. Expressed at lower level in brain, lung, sphen, liver and kidney. Weakly expressed in cardiac and skeletal muscles and ovary. In spleen, it is marginal zone B-cells. While it is weakly expressed in DOMAIN: The RID domain mediates the interaction with nuclear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DOMAIN: The SPOC domain, which mediates the interaction with NCOR2, is essential for the repressive activity (By similarity).
--- SIMILARITY: Belongs to the Spen family.
--- SIMILARITY: Contains 1 RIO (receptor interacting) domain.
--- SIMILARITY: Contains 8 RNA recognition motif (RRM) domains.
--- SIMILARITY: Contains 1 SPOC domain.
--- SIMILARITY: Contains 1 SPOC domain.
--- CAUTION: Ref.4 sequence differs from that shown due to multiple frameshifts and conflicts that create stop codons.
--- CAUTION: Ref.5 sequence differs from that shown due to what seems to be the presence of intronic sequence in the cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (POTENTIAL). "Brain-specific expression of human microtubule-associated protein 1A
"Brain-specific expression of human microtubule-associated protein 1A
(MAPLA) gene and its assignment to human chromosome 15.";
J. Neurosci. Res. 40.820-825(1995).
-!- FUNCTION: Structural protein involved in the filamentous cross-bridging between microtubules and other skeletal elements.
-!- SUBUNIT: 3 different light chains, LC1, LC2 and LC3, can associate with MAPLA and MAPLA proteins.
-!- TISSUE SPECIFICITY: Brain.
                                                                                                                                                                                                                                                                                                                         -!- DOMAIN: THe basic region containing the repeats may be responsible for the binding of MAPIA to microtubules.
-!- PTM: Various serine residues may be phosphorylated by CAMP kinase.
-!- PTM: LC2 IS COEXPRESSED WITH MAPIA. IT IS A POLYPEPTIDE GENERATED FROM MAPIA BY PROTECLYTIC PROCESSING. IT IS FREE TO ASSOCIATE WITH BOTH MAPIA AND MAPIB.
-!- SIMILARITY: TO MAPIB.

Isoid=Q01484-3; Sequence=VSP 000268;
-: TISSUE SPECIFICITY: Plasma membrane of neurons as well as glial
cells throughout the brain.
-: PTM: Phosphorylated at multiple sites by different protein kinases
and each phosphorylation event regulates the protein's structure
and function (Potential).
-: SIMILARITY: Contains 23 ANK repeats.
                                                                                                                                                                                                                                                                                                                                                          Chan W., Kordeli E., Bennett V.; A440-kD annyring structure of the major developmentally regulated domain and selective localization in unmyelinated axons:"; J. "CDNA cloning of FG-M, a large chondroitin sulfate proteoglycan

sopied during chondrogenesis in chick limb buds. Alternative

spliced multiforms of FG-M and their relationships to versican.";

J. Biol. (Chem., 268:1446-14469(1993).

-!- FUNCTION: May play a role in intercellular matrix. May take part in

the regulation of cell motility, growth and differentiation. Binds

hyaluronic acid.

-!- SUBCELLULAR LOCATION: Secreted, extracellular matrix.

-!- ALTERNATIVE PRODUCTS:

Event-Alternative splicing; Named isoforms=2;

COmment-Additional isoforms seem to exist;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This SWISS-PROT entry is copyright. -!- FUNCTION: May act as a scaffolding protein involved in the organization of synaptic active zones and in synaptic vesicle trafficking (By similarity).

-!- SUBMIT: Interacts with Rabacl/Pral, RIMS2 and profilin (By similarity).

-!- SUBCELLULAR LOCATION: Concentrated at the presynaptic side of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isold=Q9Y6V0-2; Sequence=VSP_003923, VSP_003925, VSP_003925, VSP_003925, VSP_003925,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note=No experimental confirmation available;
DOMAIN: C2 domain 1 is involved in binding calcium and
phospholipids. Calcium binds with low affinity but with high
specificity and induces a large conformational change.
SIMILARITY: Contains 2 C2 domains.
SIMILARITY: Contains 1 PDZ/DHR domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               synaptic junctions (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TISSUE SPECIFICITY: Highly expressed in testis and ovary, followed by brain and liver. Also expressed in placenta, peripherical blood, fetal thymus, heart, lung and kidney. Within brain, expression was highest in hippocampus, caudate nucleus, and expression was highest in hippocampus, caudate nucleus, and substantia nigra. Not detected in skeletal muscle and fetal liver. DOMAIN: The SET domain interacts with histone H3 but not H2A, H2B and H4, and may have a H3 lyaine specific methylation activity.

-!- DOMAIN: The SET domain interacts with histone H3 but not H2A, H2B and H4, and may have a H3 lyaine specific methylation activity.

-!- MISCELLANEOUS: Found in a critical region of chromosome 7, which is commonly deleted in malignant myeloid disorders. Partial duplication of the MLi3 gene are found in the juxtacentromeric region of chromosomes 1, 2, 13 and 21. Juxtacentromeric region of the MLi3 gene has generated the BAGE genes.

-!- SIMILARITY: Contains 1 DHHC-type zinc finger.

-!- SIMILARITY: Contains 1 RING-type zinc finger.

-!- SIMILARITY: Contains 1 RING-type zinc finger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. Cell. Belongs to the ASC-2/NCOA6 complex.
Cell. Subunit of this complex.
Cell. Belongs to the ASC-2/NCOA6 complex.
Cell. Subunit Selenosyl-L-methionine + histone L-lysine.
Cell. Subunit Belongs to the ASC-2/NCOA6 complex.
Cell. Subunit Belongs to the ASC-2/NCOA6 complex.
Cell. Subunit Belongs to the ASC-2/NCOA6 complex.
Cell. Subunit RBD-3/NCOA6, the retinoblastoma-binding protein RBD-3/NCLA2 and MLL3, and ASL2/ASCL2. Interacts with histone H3.

        -!- SUBCELLULAR LOCATION: Nuclear matrix (but not in the nucleolus), reorganization to the kinetochore/centromere (coronal surface of the outer plate) and the spindle during mitosis.
-!- DEVELOPMENTAL STAGE: Gradually accumulates during the cell cycle.
-!- PIWH: Hyperphosphorylated during mitosis.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sequence represents a human familial adenomatous polyposis coli

			:		1
human chromosome 5q1 and is also referred to as adenomatous polyposis coli gene. It is a tumour suppressor gene, and mutations in this gene have been associated with tumourigenesis in retinoblastoma and colorecta tumours, and especially familial adenomatous polyposis (FAP) and Gardner's Syndrome (GS). The protein can be used in therapy to replace lack of native functional protein and the nucleic acids can be used for gene therapy. The nucleic acids that encode them can also be used for probes and primers in detection of the cancers and predisposition to it. (Updated on 25-MAR-2003 to correct PR field.) ```
This sequence represents a human familial adenomatous polyposis coli (APC) protein isolated from 87 cDNA clones. The gene for the protein is present on human chromosome 5q21 and is also referred to as adenomatous polyposis coli gene. It is a tumour suppressor gene, and mutations in this gene have been associated with tumourigenesis in retinoblastoma and colorectal tumours, and especially familial adenomatous polyposis (PAP) and Gardner's Syndrome (GS). The protein can be used in therapy to replace lack of native functional protein and the nucleic acids can be used for gene therapy. The nucleic acids that encode them can also be used as probes and primers in detection of the cancers and predisposition to it. (Updated on 25-MAR-2003 to correct PR field.)
                             Familial adenomatous polyposis coli, APC, tumour suppressor; therapy, chromosome 5q21; tumourigenesis, retinoblastoma, colorectal tumour; FAP; Gardner's Syndrome; GS; predisposition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MAAASYDQLLKQVEALKMENSNLRQELEDNSNHLTKLETEASNMKEVLKQLQGSIEDEAM

The invention relates to a novel method for detecting Adenomatous

C Polyposis Coli (APC) protein in a sample. The method involves contacting

C the sample with antibodies which specifically binds to the 2843 amino

acid form of the human APC protein, or to a mutant APC protein, and

detecting an APC-antibody complex. Mutations in the APC gene play a role

CC in tumorigenesis, indicating that it is a tumour suppressor gene. It is

CC located on chromosome 5q21, which corresponds to the PAP (familial)

adenomatous polyposis) locus. FAP is an autosomal dominant inherited

disease in which affected individuals develop hundreds to thousands of

adenomatous polyps in the colon and rectum, some of which progress to

calenomatous polyps in the colon and rectum, some of which progress to

calenomatous polyps in the colon and rectum, some of which progress to

complement and the FAP locus is often found to be deleted in sporadic (i.e.,

complemental rissue, stomach, and prostate, and in leukaemias and

complemental rissue, and MCC, it is thought that mutations in the APC gene play

can key role in the development of FAP and sporadic tumours. The method is

cuseful for detecting APC protein and its mutant forms in foetal tissue,

constitute alteration of wild-type APC genes, and for testing therapeutic

condition alteration of wild-type APC genes, and for testing therapeutic

condition alteration of wild-type APC genes, and for testing therapeutic

condition alteration of wild-type APC genes, and for testing therapeutic

condition alteration of wild-type APC genes, and for testing therapeutic

capants for the ability to suppress tumours. The present sequence

crepresents a 2843 amino acid splice variant of the human APC protein.

This variant is more abundant than the 2742 amino acid variant (AAB23012)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes a transgenic Drosophila whose genome comprises the full-length human colon cancer gene Adenomatous Polyposis Coli (APC) allowing regulated mis-expression of the APC gene resulting in developmental abnormalities. The transgenic files are used to screen and validate efficacy of anticancer drugs, to identify new target proceins interacting with beta-catenin, genes which interact with human APC, to study the biochemical function of human APC and to identify additional components of the Drosophila Wht/Wg signalling pathway. In particular the files are used to screen potential drugs against colon cancer. This is the amino acid sequence of the human adenomatous polyposis coli (APC) protein DNA encoding which is incorporated in the transgenic flies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

cancer developing Disclosure, Page 32-37; 58pp; English.

This sequence represents a human APC protein which is used in a method of identifying candidate drugs for use in familial adenomatous polyposis (FAP) patients, or patients with increased risk of developing cancer. The protein can also be used to determine the presence or absence in a cell of wild type adenomatous polyposis coli (APC) gene or a downstream introducing a Tcf-responsive reporter gene into the cell, and measuring introducing a Tcf-responsive reporter gene into the cell, and measuring transcription of the reporter gene does not have wild type APC or a downstream protein of the PAPC transcription regulatory pathway. The construction of the APC transcription regulatory pathway. The construction of the APC transcription regulatory pathway. The construction of the APC transcription regulatory pathway. The construction of the APC transcription regulatory pathway. The conspected of being neoplastic and for treating a patient with colorectal cancer or other cancer associated with FAP, comprising administering to the patient a polypeptide comprising a portion of the APC sequence, comprising the beta-catenin binding site

The present sequence is a transcriptional activation protein related to the invention. The invention relates to human Tcf-4 proteins and their corresponding CDNA molecules which encodes transcriptional activation factorized to the content and activation in Colorecal epithelial cells. Moreover it has cativates transcription in Colorecal epithelial cells. Moreover it has been found that adenomatous polyposis coli (APC) regulates this content also provides a recombinant adenovirus, Ad-Mini-Me ie., APC Minus its also provides a recombinant adenovirus, Ad-Mini-Me ie., APC Minus its camino- and carboxyl -terminal Ends which expresses a fusion protein, cy green fluorescent protein (EPP)/CAPC containing GFP fused to the central caper fluorescent protein (EPP)/CAPC containing GFP fused to the central condition apoptosis or treating colorectal cancer. These fusion proteins care useful for treating cancer, e.g. colorectal cancer, and other cancers associated with Familial Adenomatous Polyposis (FAP) or patients with increased risk of developing cancer. Human Tcf-4 CDNA provides an excellent system for screening agents for their ability to promote callivery, integration, hybridization, expression, replication or integration in cells or in a nample suspected of being neoplastic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          121 RGFVNGSRESTGYLEELEKERSLLLADLDKEEKEKDWYYAQLQNLTKRIDSLPLTENFSL 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a protein involved in cancer diagnosis associated with APC or beta-catenin mutations. Human Tcf-4E protein expressed in colorectal epithelium transactivates transcription when associated with beta-catenin. Adenomatous polyposis coli (APC) regulates this transcriptional activation, at least in part by binding to beta-catenin. Determining wild-type APC protein for diagnosing cancer comprises introducing a Tcf responsive reporter gene having upstream sequences of a Tcf responsive reporter gene having upstream sequences of a Tcf into a cell and measuring transcription of the reporter gene. The candidate drug identified is useful for treating familial adenomatous polyposis patients with APC or beta-catenin mutations and patients with medulloblastoma, desmoid tumour, osteoma, breast, head and neck
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           009
